

Mobilgrease XHP™ Mine Series Premium moly greases for off-highway and mining

Exceptional protection under harsh operating conditions.

Mobilgrease XHP™ Mine Series is specifically designed for the lubrication of extra-heavy-duty off-highway and mining equipment. These lithium complex greases are fortified with 5 percent molybdenum disulfide and can be utilized across a wide range of operating conditions and temperatures. In addition to its exceptional staying power and extended service capabilities under harsh conditions, Mobilgrease XHP Mine Series exhibits excellent extreme-pressure and antiwear properties, outstanding structural stability, and will not corrode steel or copper-bearing alloys.

Superb resistance to water washout and water spray-off.

The ability of Mobilgrease XHP Mine Series to adhere to surfaces prevents rainwater and dredging operations from washing it away, helping ensure proper lubrication and

equipment protection even in some of the most severe water-exposure conditions. These enhanced adhesion properties provide resistance to the effects of water and mud splashing on critical lubrication points, helping create a seal to protect equipment from water and environmental ingress.

Wet structural stability.

The effects of rain and mud are part of the job for construction and mining equipment. Good wet performance capabilities require not only good surface adhesion but also the ability of the grease to retain its consistency and seal the surface when rain and mud infiltrate the lube point. Mobilgrease XHP Mine Series exhibits excellent wet structural stability, enabling the grease to maintain consistency when mixed with water.

Excellent pumpability at low temperatures.

Mobilgrease XHP Mine Series provides outstanding low-temperature pumpability and mobility, making it particularly suited for central distribution systems. This helps ensure an adequate supply of grease at low temperatures, helping to protect your equipment and drive productivity. Mobilgrease XHP 100 Mine is specifically formulated to provide excellent pumpability to -29°C (-20°F).

High-Performance Benefits

Excellent EP (extreme pressure) and antiwear properties

Reliable protection of lubricated equipment even under conditions of high sliding and heavy loading. It can help extend equipment life and reduce maintenance costs and unexpected downtime.

Resistance to thermal, oxidative, and structural degradation

Helps provide extended grease life over a broad range of temperatures and applications, providing long-lasting protection. Helps reduce maintenance costs and extend equipment and component life.

Balanced molybdenum disulfide content

A balanced amount of solid MoS₂ with other EP/AW chemistry helps provide optimum equipment protection in high sliding mechanisms and extend relubrication intervals.

Outstanding low-temperature pumpability and mobility in central systems

Mobilgrease XHP 100 Mine is specifically formulated to provide very good low-temperature mobility and pumpability, critical for year-round applications.

Mobilgrease XHP™ Mine Series — Proof of Performance

Application Expertise

Heavy Duty Grease	NLGI Grade	Visc, cSt @ 40°C	General Application*
Mobilgrease XHP 100 Mine	0	100	Superior low-temperature grease particularly suited for central systems.
Mobilgrease XHP 320 Mine	0	320	Excellent low-temperature grease particularly suited for central systems.
Mobilgrease XHP 321 Mine	1	320	Excellent all-purpose grease for chassis components and bucket pins where extra grease body is needed.
Mobilgrease XHP 322 Mine	2	320	Excellent all-purpose grease for heavily loaded chassis components, pivot pins, and bucket pins that are typically manually lubricated.
Mobilgrease XHP 681 Mine	1	680	Super-duty grease for heavily loaded off-highway equipment. Primarily recommended for the lubrication of slow-moving plain and roller-element bearings.
